

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class registry_sqlite3_insertion_failed["registry::SQLite3InsertionFailed"]
    std_exception <|-- registry_sqlite3_insertion_failed
```

The diagram illustrates an inheritance relationship. At the top is a class box for 'std::exception', which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are empty. Below this box is a blue arrow pointing upwards, with an open triangular arrowhead. At the bottom of the arrow is another class box for 'registry::SQLite3InsertionFailed', which is also divided into three horizontal sections: the top section contains the class name, and the two bottom sections are shaded gray.

registry::SQLite3Insertion
Failed
