

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class ExecFailed
    ExecFailed --|> std_exception
```

The diagram illustrates an inheritance relationship between two C++ exception classes. At the top is the `std::exception` class, represented by a white box with a gray border and two empty internal compartments. Below it is the `ExecFailed` class, represented by a gray box with a black border and two empty internal compartments. A red arrow with a hollow triangular head points from the `ExecFailed` class to the `std::exception` class, indicating that `ExecFailed` inherits from `std::exception`.

ExecFailed
